Quiz#3

Section: _____ **Group:** _____

Name(print): _____ **Student ID:** _____

Using the five-step problem-solving strategy, solve the following problem:

An object starts with an initial velocity of $3.8\mathrm{m}/s$ and moves along a straight line with a constant acceleration of $-1.1\mathrm{m}/\mathrm{s}^2$. What is the displacement of the object when its velocity is $-5.2\mathrm{m}/\mathrm{s}$?
